

K70004

FORWARD CONROLS

Crafted from thick steel, polished & plated to a jewel-like finish, our forward control sets have long been an industry standard. They seem to blend with virtually any style and offer uncompromising service by way of the brake and shift levers riding on bronze bushings, resulting in a smooth, positive feel that remains consistent time & time again.

FORWARD CONTROL KITS

Our forward controls are sold as a basic set, without pegs & master cylinders. Personal preference is important, therefore we've left the choice of pegs & brake cylinder up to you. Evolution Big Twin and FXR sets require male mount pegs, whereas Big Twin mid-mount and Sportster sets will accept female mount pegs. All control sets are delivered with a full complement of mounting hardware as well as an exploded view of the set with all pieces clearly illustrated and keyed. Replacement components are available. Take advantage of big time performance & good looks at budget-minded prices !
